

# JPA's Water Conservation Program

**It's no surprise, there is a water shortage being experienced in California. Have your properties or communities done all they can do to make sure they have conserved all the water they can?**

If they haven't shared their property's water consumption bill with JPA, we speculate that there are more savings to be had.

JPA Landscape has recently completed a pilot program to work with some key properties to optimize/minimize their water consumption.

**The Outcome Was a Resounding Success, with Reductions in Water "Units" Usage starting at 16% savings!**

What does this program look like, and what will it cost us?

**Step 1:** Provide JPA with the **water usage bill** for the current year and the **prior year**. Don't have this information? Then simply request the authorization form from JPA to allow us to access this information from your water district and we will request the reports directly from the water agency.

**Step 2:** Meet with JPA to review the detailed analysis of the water usage. Discuss possible plans/programs to implement saving approaches that fit your property requirements. Unfortunately one solution does not fit all properties when fine-tuning water consumption. And not all properties have a flexible budget in which to implement long term solutions.

**Step 3:** **Meet** with JPA to present the **proposed solutions** at your board meeting and get the project started. The sooner you move on the solution, the sooner you will start the **ROI** process and see the water savings!

Call [Customer Service](#) today to get started on this, Join the customers that have already started savings **Thousands of gallons** on water consumption!

Thank you for doing business with us.

Sincerely,

**JPA Landscape & Construction, Inc.**
