and/ or Questions.**

BARK SOLUTIONS THAT WORK FOR YOUR PROPERTY.

This is the first of two annual bark replenishment proposals for the above property to revitalize or replenish shrub beds.

This will be done with a cost effective enhancement to better improve the overall health and appearance of the beds with a clean, fresh look. Bark provides great advantages such as improved moisture retention, saving money on water that is being wasted due to draining on sidewalks. Bark also helps to reduced weed, therefore reducing gardener labor allowing focus on other landscape areas, and enhances those areas that struggle due to shade or excessive root mass.
